

# The `etexcmds` package

Heiko Oberdiek

<oberdiek@uni-freiburg.de>

2007/12/12 v1.2

## Abstract

New primitive commands are introduced in  $\varepsilon$ -TEX. Sometimes the names collide with existing macros. This package solves this name clashes by adding a prefix to  $\varepsilon$ -TEX's commands. For example,  $\varepsilon$ -TEX's `\unexpanded` is provided as `\etex@unexpanded`.

## 1 Documentation

### 1.1 `\unexpanded`

`\etex@unexpanded`

New primitive commands are introduced in  $\varepsilon$ -TEX. Unhappily `\unexpanded` collides with a macro in ConTeXt with the same name. This also affects the LATEX

world. For example, package `m-ch-de` loads `base/syst-gen.tex` that redefines `\unexpanded`. Thus this package defines `\etex@unexpanded` to get rid of the name clash.

```
\ifetex@unexpanded
```

Package `etexcmds` can be loaded even if  $\varepsilon$ -`TeX` is not present or `\unexpanded` cannot be found. The switch `\ifetex@unexpanded` tells whether it is safe to use `\etex@unexpanded`. The switch is true (`\iftrue`) only if the primitive `\unexpanded` has been found and `\etex@unexpanded` is available.

## 1.2 `\expanded`

Probably `\expanded` will be added in `pdfTeX` 1.50.4 and `LUA $\varepsilon$ TeX`. Again `ConTeXt` defines this as macro. Therefore version 1.2 of this packages also provides `\etex@expanded` and `\ifetex@unexpanded`.

# 2 Implementation

```
1 <*package>
```

## 2.1 Reload check and package identification

Reload check, especially if the package is not used with `L $\varepsilon$ TeX`.

```

## 4 Installation

### 4.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

[CTAN:macros/latex/contrib/oberdiek/etexcmds.dtx](http://CTAN:macros/latex/contrib/oberdiek/etexcmds.dtx) The source file.

[CTAN:macros/latex/contrib/oberdiek/etexcmds.pdf](http://CTAN:macros/latex/contrib/oberdiek/etexcmds.pdf) Documentation.

**Bundle.** All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](http://CTAN:install/macros/latex/contrib/oberdiek.tds.zip)

TDS refers to the standard “A Directory Structure for TeX Files” ([CTAN:tds/tds.pdf](http://CTAN:tds/tds.pdf)). Directories with `texmf` in their name are usually organized this way.

### 4.2 Bundle installation

**Unpacking.** Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

---

<sup>1</sup>[ftp://ftp.ctan.org/tex-archive/](http://ftp.ctan.org/tex-archive/)

**Script installation.** Check the directory `TDS:scripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

### 4.3 Package installation

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain-T<sub>E</sub>X:

```
tex etexcmds.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>etexcmds.sty</code>	→ <code>tex/generic/oberdiek/etexcmds.sty</code>
<code>etexcmds.pdf</code>	→ <code>doc/latex/oberdiek/etexcmds.pdf</code>
<code>test/etexcmds-test1.tex</code>	→ <code>doc/latex/oberdiek/test/etexcmds-test1.tex</code>
<code>test/etexcmds-test2.tex</code>	→ <code>doc/latex/oberdiek/test/etexcmds-test2.tex</code>
<code>test/etexcmds-test3.tex</code>	→ <code>doc/latex/oberdiek/test/etexcmds-test3.tex</code>
<code>test/etexcmds-test4.tex</code>	→ <code>doc/latex/oberdiek/test/etexcmds-test4.tex</code>
<code>etexcmds.dtx</code>	→ <code>source/latex/oberdiek/etexcmds.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

### 4.4 Refresh file name databases

If your T<sub>E</sub>X distribution (teT<sub>E</sub>X, mikT<sub>E</sub>X, ...) relies on file name databases, you must refresh these. For example, teT<sub>E</sub>X users run `texhash` or `mktexlsr`.

### 4.5 Some details for the interested

**Attached source.** The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk etexcmds.pdf unpack_files output .
```

**Unpacking with L<sup>A</sup>T<sub>E</sub>X.** The `.dtx` chooses its action depending on the format:

**plain-T<sub>E</sub>X:** Run `docstrip` and extract the files.

**L<sup>A</sup>T<sub>E</sub>X:** Generate the documentation.

If you insist on using L<sup>A</sup>T<sub>E</sub>X for `docstrip` (really, `docstrip` does not need L<sup>A</sup>T<sub>E</sub>X), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{etexcmds.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL<sup>A</sup>T<sub>E</sub>X:

```
pdflatex etexcmds.dtx
makeindex -s gind.ist etexcmds.idx
pdflatex etexcmds.dtx
makeindex -s gind.ist etexcmds.idx
pdflatex etexcmds.dtx
```

## 5 History

[2007/05/06 v1.0]

- First version.

[2007/09/09 v1.1]

- Documentation for `\ifetex@unexpanded` added.
- Catcode section rewritten.

[2007/12/12 v1.2]

- `\etex@expanded` added.

## 6 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
