

The `mathstyle` package

Morten Høgholm
`mh.ctan@gmail.com`

2008/08/13 v0.86

User's guide

This package exists for two reasons:

- The primitive operations for creating a super- or subscript in `TEX` work almost as if `^` and `_` are macros taking an argument. However, that is not quite the case, and some things that you'd expect to work don't (e.g., `^\cong`) whereas others which you'd think shouldn't work actually do (such as `^{\mathsf{s}}`). We do everyone a favor if it behaves consistently, i.e., if the superscript and subscript operations act as if they are macros taking exactly one argument.
- Because the `TEX` math typesetting engine uses infix notation for fractions, one has to use `\mathchoice` or `\mathpalette` whenever trying to do anything requiring boxing or measuring math. This creates problems for loading fonts on demand as the font loading mechanism has to load fonts for all styles without even knowing if the font is going to be used. Getting the timing of `\mathchoice` right can be tricky as well. Since `LATEX` does not promote the primitive infix notation, this package keeps track of a current `mathstyle` parameter.

1 Some usage tips

If you want to use this package with `amsmath`, it is important `mathstyle` is loaded *after* `amsmath`.

The current `mathstyle` is stored in the variable `\mathstyle`. The command `\currentmathstyle` can be used to switch to the mode currently active. Below is shown how the macro `\mathrlap` from `mathtools` is implemented without knowing about the current `mathstyle` using `\mathpalette`.

```
\providecommand*\mathrlap[1][]{%
  \ifx\@empty\#1\empty
    \expandafter\mathpalette\expandafter\@mathrlap
```

```

\else
  \expandafter \mathrlap \expandafter #1%
\fi}
\providecommand*\mathrlap[1]{\rlap{$\mathbf{m@th#1}{}$}}

```

The same definition using `\currentmathstyle` from this package.

```

\providecommand*\mathrlap[2][]{%
  \rlap{$\mathbf{m@th \currentmathstyle}{}$}}

```

Implementation

1 <code>(*package)</code>	<code>\ProvidesPackage{mathstyle}[2008/07/23 v0.85]</code>
<code>\@saveprimitive</code>	A straight copy from <code>breqn</code> , see implementation details there. Of course, with a recent pdfTEX (v1.40+), one can just use <code>\primitive</code> to get the original. We will implement that some day.
3	<code>\providecommand\@saveprimitive[2][]{%</code>
4	<code>\begingroup</code>
5	<code>\edef\@tempa{\string#1}\edef\@tempb{\meaning#1}%</code>
6	<code>\ifx\@tempa\@tempb \global\let#2#1%</code>
7	<code>\else</code>
8	<code>\edef\@tempb{\meaning#2}%</code>
9	<code>\ifx\@tempa\@tempb</code>
10	<code>\else \@saveprimitive@a#1#2%</code>
11	<code>\fi</code>
12	<code>\fi</code>
13	<code>\endgroup</code>
14	<code>}</code>
15	<code>\providecommand\@saveprimitive@a[2][]{%</code>
16	<code>\begingroup</code>
17	<code>\def\@tempb##1#1##2{\edef\@tempb##2{}\@car{}}%</code>
18	<code>\@tempb\nullfont{select font nullfont}%</code>
19	<code>\topmark{\string\topmark:}%</code>
20	<code>\firstmark{\string\firstmark:}%</code>
21	<code>\botmark{\string\botmark:}%</code>
22	<code>\splitfirstmark{\string\splitfirstmark:}%</code>
23	<code>\splitbotmark{\string\splitbotmark:}%</code>
24	<code>#1{\string#1}%</code>
25	<code>\edef\@tempa{\expandafter\strip@prefix\meaning\@tempb}%</code>
26	<code>\edef\@tempb{\meaning#1}%</code>
27	<code>\ifx\@tempa\@tempb \global\let#2#1%</code>
28	<code>\else</code>
29	<code>\PackageError{mathstyle}{%</code>
30	<code>{Unable to properly define \string#2; primitive}</code>

```

31      \noexpand#1 no longer primitive}\@eha
32      \fi
33  \fi
34 \endgroup
35 }

Do initial \chardef of \mathstyle.
36 \chardef\mathstyle=\z@

Save the four style changing primitives, \mathchoice and the fraction commands.
37 \@saveprimitive\displaystyle\@@displaystyle
38 \@saveprimitive\textstyle\@@textstyle
39 \@saveprimitive\scriptstyle\@@scriptstyle
40 \@saveprimitive\scriptscriptstyle\@@scriptscriptstyle
41 \@saveprimitive\mathchoice\@@mathchoice
42 \@saveprimitive\over\@@over
43 \@saveprimitive\atop\@@atop
44 \@saveprimitive\above\@@above
45 \@saveprimitive\overwithdelims\@@overwithdelims
46 \@saveprimitive\atopwithdelims\@@atopwithdelims
47 \@saveprimitive\abovewithdelims\@@abovewithdelims

Then we redeclare the four style changing primitives.
48 \DeclareRobustCommand{\displaystyle}{%
49   \@@displaystyle \chardef\mathstyle\z@}
50 \DeclareRobustCommand{\textstyle}{%
51   \@@textstyle \chardef\mathstyle\@ne}
52 \DeclareRobustCommand{\scriptstyle}{%
53   \@@scriptstyle \chardef\mathstyle\tw@}
54 \DeclareRobustCommand{\scriptscriptstyle}{%
55   \@@scriptscriptstyle \chardef\mathstyle\thr@@}

First we get the primitive operations. These should have been control sequences
in TEX just like operations for begin math, end math, begin display, end display.
56 \begingroup \catcode`^=7\relax \catcode`\_=8\relax % just in case
57 \lowercase{\endgroup
58 \let\@@superscript=^ \let\@@subscript=_
59 }%

Also need version with catcode 12.
60 \begingroup \catcode`^=12\relax \catcode`\_=12\relax % just in case
61 \lowercase{\endgroup
62 \let\@@superscript@other=^ \let\@@subscript@other=_
63 }%

If we enter a sub- or superscript the \mathstyle must be adjusted. Since all is
happening in a group, we do not have to worry about resetting.
64 \def\subsupstyle{%
65   \ifnum\mathstyle<\tw@ \chardef\mathstyle\tw@
66   \else \chardef\mathstyle\thr@@
67   \fi
68 }

```

Provide commands with meaningful names for the two primitives, cf. `\mathrel`.

```
69 \let\mathsup=\@supscript  
70 \let\mathsub=\@subscript  
\sb and \sp are then defined as macros.
```

```
71 \def\sb#1{\mathsub{\protect\subsupstyle{#1}}}%  
72 \def\sp#1{\mathsup{\protect\subsupstyle{#1}}}%
```

`\mathchoice` is now just a switch. Note that this redefinition does not allow the arbitrary *filler* of the TeX primitive. Very rarely used anyway.

```
73 \def\mathchoice{  
74   \relax\ifcase\mathstyle  
75     \expandafter\@firstoffour  
76   \or  
77     \expandafter\@secondoffour  
78   \or  
79     \expandafter\@thirdoffour  
80   \else  
81     \expandafter\@fourthoffour  
82   \fi  
83 }
```

Helper macros.

```
84 \providecommand\@firstoffour[4]{#1}  
85 \providecommand\@secondoffour[4]{#2}  
86 \providecommand\@thirdoffour[4]{#3}  
87 \providecommand\@fourthoffour[4]{#4}
```

The fractions. Note that this uses the same names as in `amsmath`. Much the same except here they call `\fracstyle`.

```
88 \DeclareRobustCommand\genfrac[6]{%  
89   {\fracstyle #1%  
90   {\begingroup #5\endgroup  
91     \csname @@\ifx\maxdimen#4\maxdimen over\else above\fi  
92       \if @#2@\else withdelims\fi\endcsname #2#3#4\relax  
93       #6}%  
94   }%  
95 }  
96 \renewcommand{\frac}{\genfrac{}{}{}{}}  
97 \providecommand{\dfrac}{}  
98 \providecommand{\tfrac}{}  
99 \renewcommand{\dfrac}{\genfrac\displaystyle{}{}{}}  
100 \renewcommand{\tfrac}{\genfrac\textstyle{}{}{}}  
101 \providecommand{\binom}{}  
102 \providecommand{\tbinom}{}  
103 \providecommand{\dbinom}{}  
104 \renewcommand{\binom}{\genfrac{}{}{0pt}{}}  
105 \renewcommand{\dbinom}{\genfrac\displaystyle{}{0pt}{}}  
106 \renewcommand{\tbinom}{\genfrac\textstyle{}{0pt}{}}
```

The `\fracstyle` command is a switch to go one level down but no further than three.

```

107 \def\fracstyle{\ifcase\mathstyle
108   \chardef\mathstyle=\@ne
109   \or
110   \chardef\mathstyle=\tw@
111   \else
112   \chardef\mathstyle=\thr@@
113   \fi
114 }

```

The `\currentmathstyle` checks the value of `\mathstyle` and switches to it so it is in essence the opposite of `\displaystyle` and friends.

```

115 \def\currentmathstyle{%
116   \ifcase\mathstyle
117     \@@displaystyle
118   \or
119     \@@textstyle
120   \or
121     \@@scriptstyle
122   \or
123     \@@scriptscriptstyle
124   \fi}

```

Finally, we declare the package options.

```

125 \DeclareOption{mathactivechars}{%
126   \catcode`^=12\relax
127   \catcode`\_=12\relax
128 \AtBeginDocument{\catcode`^=12\relax \catcode`\_=12\relax}}
129 \DeclareOption{activechars}{%
130   \catcode`^=13\relax
131   \catcode`\_=13\relax
132 \AtBeginDocument{\catcode`\_=12\relax \catcode`\_=13\relax}}
133 \DeclareOption{noactivechars}{%
134   \catcode`^=7\relax
135   \catcode`\_=8\relax
136 \AtBeginDocument{\catcode`\_=7\relax \catcode`\_=8\relax}}
137 \ExecuteOptions{mathactivechars}
138 \ProcessOptions\relax

```

WSPR: Set up the active behaviours: (this is set even in the `noactivechars` case but they are never activated. no worries?)

```

139 \ifnum\catcode`^=13\relax
140   \let^=\sp \let_=\sb
141 \else
142   \mathcode`^="8000\relax
143   \mathcode`\_="8000\relax
144   \begingroup
145     \catcode`^=\active
146     \catcode`\_=\active
147     \global\let^=\sp
148     \global\let_=\sb
149   \endgroup

```

```
150 \fi  
151 </package>
```
