

The `soulutf8` package

Heiko Oberdiek

<oberdiek@uni-freiburg.de>

2007/09/09 v1.0

Abstract

This package extends package `soul` and adds some support for UTF-8. Namely the input encodings `utf8.def` from package `inputenc` and package `ucs`'s `utf8x.def` are supported.

1 Documentation

This package `soulutf8` does not have own options and does not define new user commands. Any option is passed to package `soul` [1] that is loaded first. Then some internal macros of `soul` are redefined to add support for UTF-8. The following input encodings are supported:

```
utf8    LATEX base   TDS:tex/latex/base/utf8.def [3]
utf8x   Package ucs   TDS:tex/latex/ucs/utf8x.def [2]
```

UTF-8 byte sequences are added as token group to a word, even if these UTF-8 characters are some kind of hyphen or space. As exception the following three Unicode characters are handled specially:

| Slot | Name | Action |
|--------|----------------|--------|
| U+00A0 | NO-BREAK SPACE | like ~ |
| U+2013 | EN DASH | -- |
| U+2014 | EM DASH | --- |

1.1 Patch

Also package `soulutf8` tries to patch package `soul` to improve its behaviour:

- A problem with additional levels of curly braces is fixed. As advantage more implicit kernings are detected. However, the result may be incompatible with the original behaviour of package `soul` because of these respected implicit kernings.
- ε -T_EX, especially `\unexpanded` is supported. This allows a better protection of token groups (`\mbox{...}`, `math`, ...).

1.2 Future

Currently package `soul` does not seem to be maintained. Nevertheless if there will be a new version that adds support for UTF-8, then this package may become obsolete.

2 Implementation

1 `{*package}`

2.1 Reload check and package identification

Reload check, especially if the package is not used with L^AT_EX.

```

112 \ifx\documentclass\undefined

```

2.3 Loading packages

Package `soul` uses `\documentclass` to detect L^AT_EX.

```
112 \ifx\documentclass\undefined
```

2.3.1 plain-T_EX

First we check, whether package `soul` is already loaded.

```
113 \expandafter\ifx\csname SOUL@\endcsname\relax
```

In case of plain-T_EX package `soul` defines some macros in a simple manner that will break the definitions of `miniltx.tex`, for example. Therefore these macros are first saved and restored afterwards.

```

114 \let\SOuL@orgDeclareRobustCommand\DeclareRobustCommand
115 \let\SOuL@orgnewcommand \newcommand
116 \let\SOuL@orgDeclareOption \DeclareOption
117 \let\SOuL@orgPackageError \PackageError
118 \def\SOuL@restorelatexcmds{%
119   \let\DeclareRobustCommand\SOuL@orgDeclareRobustCommand
120   \let\newcommand \SOuL@orgnewcommand

```

```

121      \let\DeclareOption      \SOUL@orgDeclareOption
122      \let\PackageError       \SOUL@orgPackageError
123  }%
124  \input soul.sty\relax
125  \SOUL@restorelatexcmds
126 \fi

\SOUL@error Package soul's use of \PackageError is replaced by \c@PackageError of package infwarerr.

127 \input infwarerr.sty\relax
128 \let\SOUL@orgSOUL@error\SOUL@error
129 \def\SOUL@error{%
130   \begingroup
131     \let\PackageError\c@PackageError
132     \SOUL@orgSOUL@error
133   \endgroup
134 }%
135 \input etexcmds.sty\relax

@conelevel@sanitize Define LATEX's \c@conelevel@sanitize if not already available.

136 \expandafter\ifx\csname \c@conelevel@sanitize\endcsname\relax
137   \def\c@conelevel@sanitize#1{%
138     \edef#1{%
139       \expandafter\strip@prefix\meaning#1%
140     }%
141   }%
142   \def\strip@prefix#1>{}{%
143     \fi
144 \else

```

2.3.2 L^AT_EX

```

145 \DeclareOption*{\PassOptionsToPackage{\CurrentOption}{soul}}%
146 \ProcessOptions\relax
147 \RequirePackage{soul}[2003/11/17]%
148 \RequirePackage{infwarerr}[2007/09/09]%
149 \RequirePackage{etexcmds}[2007/09/09]%
150 \fi

```

2.3.3 ε-T_EX

In plain-T_EX command \+ is an *outer* macro. Therefore numbers are used to avoid problems.

```

151 \ifetex@unexpanded
152   \catcode33=14 % '!': comment
153   \catcode43=9 % '+': ignore
154 \else
155   \catcode33=9 % '!': ignore
156   \catcode43=14 % '+': comment
157 \fi

```

2.4 Macro for redefinitions

```

\SOUL@redefine

158 \def\SOUL@redefine#1{%
159   \begingroup
160     \def\SOUL@cmd{\#1}%
161     \afterassignment\SOUL@cmdcheck
162     \def\SOUL@temp
163 }

```

```

\SouL@cmdcheck
164 \def\SouL@cmdcheck{%
165   \expandafter\ifx\SouL@cmd\SouL@temp
166   \else

168     \PackageWarningNoLine{soulutf8}{%
169       Command \SouL@temp* has changed.\MessageBreak
170       Supported versions of package ‘soul’: 2003/11/17.\MessageBreak
171       Depending on the unknown changes the redefinition\MessageBreak
172       of \SouL@temp* may not behave correctly}%
173   }%
174   \fi
175 \expandafter\endgroup
176 \expandafter\def\SouL@cmd
177 }

```

2.5 Redefinition of \SOUL@eval

- \SOUL@eval Macro \SOUL@eval is redefined to add detection of the first byte of a UTF-8 sequence. Because \SOUL@eval is overwritten, a warning is issued, if the contents of \SOUL@eval is not as expected.

```
178 \SOUL@redefine\SOUL@eval{%
```

First the expected definition.

```

```

2.7.1 Redefinition of \SOUL@splittoken

\SOUL@splittoken Macro \SOUL@splittoken separates the first token or token group from a word and redefines the word to contain the remaining tokens. However if the remaining tokens are a token group, then the curly braces will be removed and the token group is splitted by the next call of \SOUL@splittoken. The redefinition avoids the removal of curly braces around the remaining tokens.

```

479 \SOuL@redefine\SOUL@splittoken#1#2\SOUL@stop{%
480     \global\SOUL@token={#1}%
481     \global\SOUL@word={#2}%
482 }#1{%
483     \global\SOUL@token={#1}%
484     \SOuL@remainingtoken\relax
485 }

```

\SOuL@remainingtoken

```

486 \def\SOuL@remainingtoken#1\SOUL@stop{%
487     \global\SOUL@word=\expandafter{\@gobble#1}%
488 }

```

2.8 Patches

The fixed `\SOUL@splittoken` allows to remove the double sets of curly braces in other macros of package `soul`. The benefit is that implicate kernings are more often detected and fixes a bug in package `soul`. The disadvantage is incompatibility. The width of the resulting strings may change.

4 Installation

4.1 Download

Package. This package is available on CTAN¹:

CTAN:macros/latex/contrib/oberdiek/soulutf8.dtx The source file.

CTAN:macros/latex/contrib/oberdiek/soulutf8.pdf Documentation.

Bundle. All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

CTAN:install/macros/latex/contrib/oberdiek.tds.zip

TDS refers to the standard “A Directory Structure for TeX Files” (CTAN:tds/tds.pdf). Directories with `texmf` in their name are usually organized this way.

4.2 Bundle installation

Unpacking. Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory `TDSScripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

4.3 Package installation

Unpacking. The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain-Tex:

```
tex soulutf8.dtx
```

¹[ftp://ftp.ctan.org/tex-archive/](http://ftp.ctan.org/tex-archive/)

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

```
soulutf8.sty           → tex/generic/oberdiek/soulutf8.sty
soulutf8.pdf          → doc/latex/oberdiek/soulutf8.pdf
test/soulutf8-test1.tex → doc/latex/oberdiek/test/soulutf8-test1.tex
test/soulutf8-test2.tex → doc/latex/oberdiek/test/soulutf8-test2.tex
test/soulutf8-test3.tex → doc/latex/oberdiek/test/soulutf8-test3.tex
test/soulutf8-test4.tex → doc/latex/oberdiek/test/soulutf8-test4.tex
test/soulutf8-test5.tex → doc/latex/oberdiek/test/soulutf8-test5.tex
soulutf8.dtx          → source/latex/oberdiek/soulutf8.dtx
```

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

4.4 Refresh file name databases

If your `TeX` distribution (`teTeX`, `mikTeX`, ...) relies on file name databases, you must refresh these. For example, `teTeX` users run `texhash` or `mktexlsr`.

4.5 Some details for the interested

Attached source. The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk soulutf8.pdf unpack_files output .
```

Unpacking with L^AT_EX. The `.dtx` chooses its action depending on the format:

plain-`TeX`: Run `docstrip` and extract the files.

L^AT_EX: Generate the documentation.

If you insist on using L^AT_EX for `docstrip` (really, `docstrip` does not need L^AT_EX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{soulutf8.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with `pdfLATEX`:

```
pdflatex soulutf8.dtx
makeindex -s gind.ist soulutf8.idx
pdflatex soulutf8.dtx
makeindex -s gind.ist soulutf8.idx
pdflatex soulutf8.dtx
```
