Abstract

The first RFC that describes an RTP payload format for ITU Telecommunication Standardization Sector (ITU-T) recommendation H.263 is RFC 2190. This specification discusses why to move RFC 2190 to historic status.

5. Normative References	3
6. Informative References	3

1. Introduction

The ITU-T recommendation H.263 [H263] specifies the encoding used by ITU-T-compliant video-conference codecs. The first version (version 1) was approved in 1996 by the ITU, and a payload format for encapsulating this H.263 bitstream in the Real-time Transport Protocol (RTP) is in RFC 2190 [RFC2190]. In 1998 the ITU approved a new version of H.263 [H263P] that is also known as H.263 plus. This version added optional features, and a new payload format is now in RFC 2429 [RFC2429]. RFC 2429 is capable of carrying encoded video bit streams that are using only the basic H.263 version 1 options.

RFC 2429 [RFC2429] states that it does not replace RFC 2190, which continues to be used by existing implementations and may be required for backward compatibility in new implementations. Implementations using the new features of the 1998 version of H.263 and later versions shall use the format described in RFC 2429.

RFC 2429 is now being revised and will include language that will make it clear that all new implementations MUST use RFC 4629 [RFC4629] for encoding of any version of H.263.

2. Terminology

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in RFC 2119 [RFC2119] and indicate requirement levels for compliant RTP implementations.

3. Recommendation

RFC 2429 and RFC 4629 [RFC4629] can be used to carry new H.263 payloads even if they are using only the features defined in the 1996 version. All the H.263 features that are part of the 1996 version are also part of the 1998 version and later versions.

It is recommended that RFC 2190 be moved to historic status and that, as stated in RFC 4629 [RFC4629], new implementations use the RFC 4629 and the H263-1998 and H263-2000 Media Types.

This recommendation will come into effect at the publication or as soon as possible after the publication of RFC 4629 [RFC4629].

4. Security Considerations

Security considerations for the H263 video RTP payload can be found in the RFC 4629 [RFC4629]. Using the payload specification in RFC 4629 instead of that in RFC 2190 does not affect the security consideration since both of them refer to RFC 3550 [RFC3550] and RFC 3551 [RFC3551] for security considerations.
